Kolkata, West Bengal, IN

Full-Stack Engineer specializing in the MERN stack and high-performance web architectures. Adept at designing scalable, low-latency backends and integrating real-time WebRTC communication systems. Proven track record of engineering applications from scratch, optimizing media streams, and embedding AI pipelines into production.

Work Experience

Junior Full-Stack Engineer

Nov 2025 - May 2026

Nullclass Edtech Private Limited | Krishnagiri, Tamil Nadu, India

- Spearheaded the development of a fully functional video streaming application from scratch, integrating WebRTC protocols and VoIP for seamless real-time communication.
- Engineered core platform functionalities, including video uploading, live streaming capabilities, and intuitive video gestures to significantly enhance user engagement.
- Integrated a secure Razorpay payment gateway to handle application transactions, and developed a comment translation feature alongside real-time commenting to support a diverse user base.

Projects

TTS Voice Assistant (Steve)

Feb 2026 - Present

- Architected a full-stack, low-latency audio processing pipeline utilizing React.js and Node.js to manage real-time text-to-speech (TTS) workflows.
- Integrated advanced AI orchestration capabilities using the Gemini API to enable real-time web-searching and context-aware responses, achieving minimal API inference latency.
- Engineered a scalable text processing pipeline capable of efficiently identifying and blocking malicious or irrelevant content in real-time.

Toxicity Guard Microservice API

Feb 2026 - Present

- Engineered a scalable machine learning microservice API designed to evaluate text payloads and isolate malicious content in real time using the Hugging Face text-classification pipeline.
- Developed a modern, decoupled React frontend dashboard to provide real-time metrics, analytics, and instant validation of content toxicity states.
- Integrated a machine learning text-classification model via the Hugging Face API into the backend infrastructure to process high volumes of text data with minimal latency.

Task-flow (Project Management Tool)

Jan 2026 - Present

- Architected a scalable full-stack project management platform using React.js and Node.js to streamline distributed team collaboration and complex tracking workflows.
- Designed highly optimized database schemas using MongoDB and Mongoose ODM to efficiently manage dynamic task states, granular user permissions, and collaborative project timelines.
- Engineered secure, stateless user authentication protocols and robust backend routing structures to guarantee safe, low-latency data retrieval and system integrity under concurrent usage.

Core Skills

Languages: JavaScript, TypeScript, Python, SQL

Frontend: React.js, Tailwind CSS

Backend: Node.js, Express.js, FastAPI, REST API

Databases: MongoDB, PostgreSQL, MariaDB, Firebase/Supabase

APIs & Integrations: Gemini API, Razorpay, Hugging Face API, Google Maps Platform API

Tools & Protocols: Git & GitHub, Socket.io, WebRTC, Docker, VoIP, Jest

Education

Asansol Engineering College (AEC)

Aug 2021 - Aug 2025

Bachelor of Technology Computer Science & Engineering

GPA: 7.13/10.0

Languages

Bengali (*Native speaker*), **English** (*Work Proficient*), **Hindi** (*Work Proficient*)
