Apcar garden, Kolkata, West Bengal, IN

Recent B.Tech CSE Graduate and Full Stack Developer specializing in the MERN stack. Passionate about building scalable web applications, integrating complex backend architectures, and utilizing WebRTC for real-time communication.

Work Experience

Full Stack Web Development Internship

Nov 2025 - Present

Null Class Ed-Tech Pvt Ltd | remote

- Spearheaded the development of a fully functional video streaming application from scratch, integrating WebRTC protocols and VoIP for seamless real-time communication.
- Engineered core platform functionalities, including video uploading, live streaming capabilities, and intuitive video gestures to significantly enhance user engagement.
- Integrated a secure Razorpay payment gateway to handle application transactions, and developed a comment translation feature alongside real-time commenting to support a diverse user base.
- Replicated complex system designs focusing on scalability and user data management, while proactively debugging cross-browser compatibility issues related to media stream APIs.

Projects

Spam Comment Detection API

Feb 2026 - Present

- Developed a robust RESTful API designed to automatically analyze and filter spam from user-generated comments, significantly enhancing platform security and content quality.
- Integrated a machine learning text-classification model via the Hugging Face API into the backend infrastructure to process high volumes of text data with minimal latency.
- Engineered a scalable text processing pipeline capable of efficiently identifying and blocking malicious or irrelevant content in real-time.

Steve (Text-To-Speech Voice Assistant)

Feb 2026 - Present

- Integrated the Gemini 2.5 Flash API to power an intelligent, context-aware virtual assistant capable of processing complex queries and generating rapid, natural language responses.
- Engineered the core audio processing architecture using Python to seamlessly handle real-time voice inputs and text-to-speech outputs with minimal latency.
- Designed a robust conversational flow that accurately interprets spoken user instructions and maintains dialogue context for an interactive user experience.

Task-flow (Project Management Tool)

Jan 2026 - Present

- Architected a scalable full-stack project management application utilizing React.js & Node.js to streamline complex task tracking and team collaboration workflows.
- Engineered secure user authentication and robust backend routing protocols to ensure efficient data retrieval, system integrity, and a seamless user experience.
- Designed optimized database schemas using MongoDB's Object Data Modeling (ODM) library Mongoose to manage dynamic task states, user roles, and project timelines effectively.

Core Skills

Languages: JavaScript, TypeScript, Python, SQL

Frontend: React.js, Tailwind CSS

Backend: Node.js, Express.js, REST API

Databases: MongoDB, MariaDB, Firebase/Supabase

APIs & Integrations: Gemini 2.5 Flash API, Razorpay, Google Maps Platform, Hugging Face API, FastAPI

Tools & Protocols: Git & GitHub, WebRTC, VoIP, Socket.io

Education

Asansol Engineering College

Aug 2021 - Aug 2025

Bachelor of Technology Computer Science & Engineering

GPA: 7.13/10.0

Languages

English (*Work proficient*), **Hindi** (*Work proficient*), **Bengali** (*Native*)
